Statement of Purpose

My name is Muhammad Yaseen, I am alumni of COMSATS University Islamabad. I have done Bachelor of Science in Computer Science. My overall CGPA is 2.96 which is equivalent to 72.3% according to COMSATS Grading criteria. Now, I am currently working as a Frontend Engineer in a Company by name Evamp & Saanga from last 2 week.

Now, my plan is about to doing MS in IT from Australian university because of its good reputation, influence and ranking in the world. Most of good universities which are in top 1% are in Australia, It is one of the big reason to choose australia.

I have search for some good universities which was good in MS(IT) and Cyber security and in which Curtin University was more attractive because of its good ranking(top 1%), student and study environment. One of the reason is to choose Curtin is its certification of excellence. Curtin students are consider worthy according to job point of view in all over the world specially in my country pakistan.

If someone talk about higher studies in abroad so, here I am giving importance to Australian universities over any other country because Australian government and universities support students by offering them different opportunities and scholarships and there is no racism concept in australian universities.

I have short listed 2 major courses name in which further I want to proceed. The first one is Master of Information System and Technologies and the second one is Master in Cyber Security.

These two deciplines are highly demanding in my country specially in my city where I am currently living. So, thats why after completing my MS from Curtin, I want come to pakistan and want to join System Limited and Netsol as a Solution Architect because both of these companies want highly educated and skilled persons for their companies and these companies pay better according to designation.
